Description

Precondition: User is logged in as "standard_user" and is on the inventory page (<https://www.saucedemo.com/inventory.html>). The cart is empty.

Steps to Reproduce:

1. Click the cart icon in the top-right corner
2. Confirm the cart is empty (no items listed)
3. Click the "Checkout" button
4. Enter First Name: "Ivan"
5. Enter Last Name: "Ivanov"
6. Enter Zip/Postal Code: "1111"
7. Click "Continue"
8. Click "Finish"

Actual Result: The user is redirected to /checkout-complete.html and receives the confirmation "Thank you for your order!" — an empty, \$0 order is completed.

Checkout: Complete!

Thank you for your order!

Your order has been dispatched, and will arrive just as fast as the pony can get there!

Back Home

Expected Result: The system should prevent empty-cart checkout — e.g. the "Checkout" button is disabled when the cart is empty, or an error ("Your cart is empty") is shown, and the order is NOT completed.

Severity: Medium — the system does not crash, no data is lost, and the core checkout flow works. The defect is a missing validation rule that allows an invalid state, not a broken function.

Priority: High — empty \$0 orders pollute the order/accounting system and create meaningless work for the business, so it should be fixed quickly.

Environment: Chrome 148.0.7778.217 / Windows 10 / user: standard_user
