Description

Precondition: User is logged in as "problem_user" and is on the inventory page (<https://www.saucedemo.com/inventory.html>).

Steps to Reproduce:

1. Add a product whose "Add to cart" button works (e.g. "Sauce Labs Backpack")
2. Click the cart icon in the top-right corner
3. Confirm the product is listed in the cart
4. Click "Checkout"
5. Enter First Name: "Ivan"
6. Attempt to enter Last Name: "Ivanov"
7. Observe the field behavior

Actual Result: The "Last Name" field does not accept input. Characters typed into "Last Name" appear in the "First Name" field instead. Additionally, only a single character is retained — each new character replaces the previous one. As a result the required "Last Name" cannot be filled and "Continue" cannot be completed → checkout is blocked.

Expected Result: The user can fill "First Name", "Last Name" and "Zip/Postal Code" independently and proceed via "Continue" to complete the order.

Severity: High — a core function (purchasing) is completely broken with no workaround for the affected user; the order cannot be placed. (Critical is also defensible, since checkout is fully blocked.)

Priority: High — checkout/revenue is blocked, so it must be fixed as soon as possible.

Environment: Chrome 148.0.7778.217 / Windows 10 / user: problem_user
