Description

Precondition: Two accounts available (e.g. "standard_user" and "problem_user"); same browser.

Steps to Reproduce:

1. Log in as "standard_user" and add one or more items to the cart

2. Open the menu and click "Logout"

3. Log in as "problem_user"

4. Open the cart

Actual Result: The items added by "standard_user" are still in the cart under "problem_user". The same happens with removals — cart state carries over between accounts.

Expected Result: Each user account has its own independent cart; logging into a different account shows that account's own (empty) cart.

Severity: High — this is a data-integrity / privacy defect, not a cosmetic one: one account's cart data appears under another account. Data must not leak between users.

Priority: High (arguably Critical) — a previous user's cart can be seen, and the current user may unknowingly order items they didn't add, causing wrong orders and a privacy concern.

Environment: Chrome 148.0.7778.217 / Windows 10
